DISCUSSION OF THE PRIOR ART

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kanbara et al. (US 5,091,823) discloses a ruggedized inverter structure comprising an integral frame 2, the integral frame having an integral frame right vertical wall (wall of integral frame adjacent to cables 12), an integral frame rear vertical wall (between left vertical wall and right vertical wall and which has opening for fan 6 provided in base 1) and a left vertical wall (directly opposed to right vertical wall), a rectangular base 1 having a rectangular base plate (which supports circuit board 5a), the rectangular base plate having a front side, a rear side, a right side and a left side (corresponding to walls of integral frame), the rectangular base plate front side having a front mounting flange (along base of front side), the rectangular base rear side having a rear mounting flange (at base of rear side), the rectangular base plate right side having a right vertical wall and the rectangular base plate left side having a left vertical wall, the front and rear mounting flanges and the right and left vertical walls being integral to the rectangular base plate, each having an external and internal surface, the rectangular base right and left vertical external wall external surfaces being coupled to the integral frame's right vertical wall and integral frame left vertical wall's internal surfaces, a transformer assembly having a transformer (mounted on the circuit board). However, the reference does not teach providing a transformer mounting means for rigidly coupling the transformer to the front and rear mounting flange as the transformer is

mounted to the circuit board and not to the front and rear mounting flanges and would not require a transformer mounting means.
